DETAILED ACTION

Response to Amendment

1. Preliminary amendment filed on March 30, 2001 has been entered. Since claims 29-32 have been canceled, the claims pending in this application are claims 1-28, 33, and 34.

Election/Restrictions

2. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 1-18, drawn to a method for amplification of at least one nucleic acid.

Group II, claims 19-28 and 33, drawn to a plurality of different nucleic acid templates (claims 19-24), a solid support (claims 25-28), and a kit for use in nucleic acid amplification or sequencing (claims 33 and 34).

3. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because the technical feature linking Groups I and II, a plurality of different nucleic acid templates or at least one nucleic acid templates recited in claim 19, are known in the art. For example,

Art Unit: 1634

Smith *et al.*, (see column 12, lines 35-46 in US Patent No. 5,753,439, filed on May 19, 1995) teach a plurality of probes. Each of them containing 5' and a 3' sequence complementary to the target nucleic acid and from 10 to 109 internal repeats are synthesized on an oligonucleotide synthesizer and all the probes are synthesized with a 5' biotin (a means on 5' end as recited in claim 19). These biotinylated probes are attached to the bottom of a plate coated with immobilized streptavidin (a solid support as recited in claim 19). Since a plurality of probes are synthesized on an oligonucleotide synthesizer, their 3' and 5' sequence are known as recited in claim 19. The phrase "to be amplified" in claim 19 is an intended use of a plurality of different nucleic acid templates.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

Priority

4. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Europe on September 30, 1998. It is noted, however, the examiner can not locate a certified copy of this European application as required by 35 U.S.C. 119(b).
